What Is the IC3 Certification?

The International Computer Driving License (ICDL) Foundation, known today as the International Computer Driving License (ICDL) Foundation, developed the IC3 – Internet Computer Core certification. The IC3 is a globally recognized credential that validates a candidate's ability to use a computer and the internet efficiently and safely. It's designed for people at any skill level who need to demonstrate a baseline proficiency in essential computer skills.

Because employers, educational institutions, and government agencies often require or recommend the IC3, earning this certification can open doors to new job opportunities, promotions, and a stronger digital presence.

Exam Overview: What You'll Be Tested On

The IC3 exam is divided into seven distinct domains, each covering a critical area of computer literacy. Understanding the structure and weighting of these domains is the first step in crafting a focused study plan.

1. Computer Basics – 12% of the exam
2. Internet Basics – 12%
3. Word Processing – 12%
4. Spreadsheets – 12%
5. Presentations – 12%
6. Security & Safety – 12%
7. Problem Solving & Troubleshooting – 20%

Each domain contains multiple-choice questions that test both theoretical knowledge and practical application. The overall passing score is 70%, with a minimum of 40 questions answered correctly in each domain.
